

Hylire – Project Documentation

Problem Statement

Uses of Hylire

- Manage multiple construction projects from a single dashboard.
- Track project progress in real time.
- Assign and monitor tasks for team members.
- Store and access project documents securely.
- Improve communication between clients, contractors, and engineers.
- Monitor project timelines and milestones.
- Keep project information organized and easily accessible.
- Reduce paperwork and manual record-keeping.
- Increase transparency and accountability throughout the project lifecycle.

Innovative Features & Technologies Used

Smart Brick Estimation (Key Feature)

Hylire automatically calculates the approximate number of bricks required for a construction project based on the building dimensions and structural inputs. This feature helps builders minimize material wastage, improve planning, and estimate construction costs more accurately.

Smart Material Estimation (Key Feature)

The application estimates the quantity of essential construction materials such as cement, sand, steel, aggregates, and other resources required for the project. This enables efficient procurement, better inventory management, and optimized budgeting before construction begins.

Real-Time Work Monitoring

Project managers and builders can monitor site progress in real time, track completed tasks, and receive live updates to ensure projects remain on schedule.

Building Cost Estimation

Based on the estimated materials and project specifications, hlyire provides an approximate construction cost, helping clients and builders make informed financial decisions.

Integrated Team Collaboration

The application includes a collaboration platform similar to Microsoft Teams, allowing team members to communicate, share documents, and coordinate project activities from a single workspace.

Multi-Site Management

Builders can create and manage multiple construction sites simultaneously while assigning dedicated teams of workers to each site for better organization and supervision.

Conclusion

Hylire is a modern web application designed to simplify construction project management by bringing project tracking, collaboration, and document management into a single platform. By leveraging modern web technologies such as React.js and Supabase, the application provides a secure, scalable, and user-friendly solution for the construction industry.
